## OWNER'S MANUAL

MODEL T

## INDUSTRIAL DUTY DOOR OPERATOR

2 YEAR WARRANTY
Serial \#
(located on electrical box cover)
Installation Date $\qquad$
Wiring Type $\qquad$

NOT FOR RESIDENTIAL USE

US
MOTOR
TYPE: ...............................Continuous duty
HORSEPOWER:................1/3, 1/2, 3/4 \& 1 Hp
Single or Three phase

SPEED:............................. 1725 RPM
VOLTAGE: ..........................115, 220, 230 Single phase
230, 460, 575 Three phase
CURRENT: ........................See motor nameplate

## MECHANICAL

DRIVE REDUCTION:
.Primary: Heavy duty
(5L) V-Belt. Secondary: \#41 chain/sprocket. Output: \#48 chain ( $1 / 3 \& 1 / 2 \mathrm{Hp}$ ) or \#41 chain $(3 / 4 \& 1 \mathrm{Hp})$
OUTPUT SHAFT SPEED: ..... 140 R.P.M.
DOOR SPEED: $\qquad$ 11" - 12" per sec.
depending on door
BRAKE: $\qquad$ Solenoid actuated disc brake on $3 / 4 \& 1 \mathrm{Hp}$
BEARINGS: $\qquad$ Output Shaft: Shielded
Ball Bearing. Clutch Shaft: IronCopper sintered and oil impregnated.

## ELECTRICAL

TRANSFORMER:.............24VAC
CONTROL STATION: ......NEMA 1 three button station. OPEN/CLOSE/STOP

WIRING TYPE: .................C2 (Factory Shipped)
Momentary contact to OPEN \& STOP, constant pressure to CLOSE, open override plus wiring for sensing device to reverse. See page 8 for optional control settings.
LIMIT ADJUST: Linear driven, fully adjustable screw type cams. Adjustable to 24 feet.

| MECHANICAL | SAFETY |
| :---: | :---: |
| DRIVE REDUCTION: $\qquad$ Primary: Heavy duty (5L) V-Belt. Secondary: \#41 chain/sprocket. | DISCONNECT: $\qquad$ Quick disconnect door arm for emergency manual door operation. |
| Output: \#48 chain ( $1 / 3 \& 1 / 2 \mathrm{Hp}$ ) or \#41 chain ( $3 / 4 \& 1 \mathrm{Hp}$ ) OUTPUT SHAFT SPEED: ..... 140 R.P.M. | REVERSING EDGE:.....(Optional) Electric or pneumatic sensing device attached to the bottom edge of door. |
| DOOR SPEED: ......................11" - 12" per sec. | A REVERSING EDGE IS STRONGLY RECOMMENDED FOR ALL COMMERCIAL |
| BRAKE: $\qquad$ Solenoid actuated disc brake on $3 / 4$ \& 1 Hp | OPERATOR INSTALLATIONS. REQUIIED WHEN THE 3 BUTTON CONTROL STATION IS OUT OF SIGHT OF DOOR OR ANY OTHER CONTROL |
| BEARINGS: $\qquad$ Output Shaft: Shielded Ball Bearing. Clutch Shaft: IronCopper sintered and oil impregnated. | (AUTOMATIC OR MANUAL) IS USED. |

KEEP DOOR BALANCED. STICKING OR BINDING DOORS MUST BE REPAIRED. DOORS, DOOR SPRINGS, CABLES, PULLEYS, BRACKETS AND THEIR HARDWARE MAY BE UNDER EXTREME TENSION AND CAN CAUSE SERIOUS PERSONAL INJURY OR DEATH. CALL A PROFESSIONAL DOOR SERVICEMAN TO MOVE OR ADJUST DOOR SPRINGS OR HARDWARE.

## TRACK ASSEMBLY

1. Using the $3 / 8 "-16 \times 3 / 4 \mathrm{"}$ bolts and flange hex nuts supplied, assemble the operator track by installing and tightening the track spacer brackets. Position the spacers evenly over the length of the track. NOTE: The nylon pad on the spacer bracket should face up.
2. Using (2) $3 / 8$ "-16 x 1 " bolts and lock washers, install the front idler assembly to the second set of holes of one end of the track. Refer to the illustration below.
3. Slide the trolley carriage onto the track so that the take-up bolt will be toward the operator.

## POWERHEAD ATTACHMENT

1. Position the track assembly on the frame of the powerhead so that the motor side of operator is in back (away from door ).
2. Loosely install two $3 / 8$ " $-16 \times 3 / 4$ " bolts and nuts in third hole from the end of the track.
3. Align the track so that the bolts inserted in step 2 line up with the L-Slots in the frame.
4. Connect the track to the powerhead by fastening two $3 / 8$ " $-16 \times 3 / 4$ " bolts and nuts through the frame and the end holes in track. Tighten all four bolts to secure the track to the powerhead.

## TROLLEY CARRIAGE / CHAIN ATTACHMENT

1. Attach the take-up bolt to the trolley carriage using 3/8-16 hex nuts and lock washer, as shown below.
2. Using one of the master links, attach the chain to the other end of the trolley carriage. Reel the chain around the front idler shaft, over the spacer brackets, back to the drive shaft sprocket, and then to the takeup bolt on the carriage.
3. Using the other master link, attach the chain to the take-up bolt and tighten to the desired chain tension.

Chain Tension: With trolley positioned at either end of the track, a properly adjusted chain will sag about $3^{\prime \prime}$ at the mid-point. If necessary, remove links from the chain to achieve proper adjustment.

Take-Up Bolt

SPACER BRACKET (Mounted Nylon Pad Side Up)

## TROLLEY CARRIAGE

or

## INSTALLATION INSTRUCTIONS

IMPORTANT NOTE: Before the operator is installed, be sure the door has been properly aligned and is working smoothly. Although each installation will vary due to particular building characteristics, refer to the following general procedures to install the operator.

## MOUNT HEADER BRACKET

The trolley operator is generally mounted over the center of the door. However, off center mounting may be required due to interfering structures or location of door stile / top section support. In such cases, the operator may be mounted up to 24 " off center on torsion spring doors. Extension springs require center mounting.

1. Locate the center of the door and mark a line on the wall directly above the door. Extend this line up the wall.
2. Determine the highest point of door travel. Slowly raise the door and observe the action of the top section. When the top section reaches its highest point, use a level and project a line from this point to the center line the of the door.

3. Using the projected lines for location, mount a suitable wood block or length of angle iron to the wall above the door opening. Refer to the illustration below. This will provide a mounting pad for the front header bracket of the operator. If necessary reinforce the wall with suitable mounting brackets to ensure adequate support of mounting pad. Using suitable hardware, mount the ( $U$ shaped) front header bracket to the pad.

Header Bracket Drill Pattern

## MOUNT OPERATOR

1. Allowing the motor to rest on the floor, raise the front end of the track assembly to the front header bracket and fasten using the $3 / 8$ "dia. x 6.40 " long pivot shaft and cotterpins supplied.

2. Swing the operator to a horizontal position above the guide rails and temporarily secure with a suitable rope, chain, or support from the floor. Now open garage door slowly, being careful not to dislodge the temporary support. Using the door as a support, place a level against the rail and shim the operator until it is horizontal. Make sure that the operator is aligned with the center line of the door.

Operator Alignment

## INSTALLATION INSTRUCTIONS

## OPERATOR SUPPORT

1. The illustration below shows a typical method of hanging the operator from the ceiling. Each installation may vary, but in all cases side braces should be used for additional strength.
2. For mounting of the support brace(s) to the powerhead, Four holes (clearance up to $3 / 8$ " bolts) are located on each side of frame.

NOTE: If the operator is longer than 15 feet, use of a mid-span support is recommended.

## STRAIGHT ARM ATTACHMENT

1. Fully close the door and move the trolley slider to within (2") two inches of the front idler.
2. Latch the straight door arm to the fixed roll pin in the trolley carriage. Make sure the open side of notch on the arm faces the doorway.
3. Attach the door bracket to the door arm using the $3 / 8$ "-16 x 1 " bolt and nylon locking nut provided. Leave the nut and bolt loose enough to allow the two pieces to pivot freely.
4. Using $3 / 8^{\prime \prime}$ hardware provided, bolt the curved door arm to the straight arm, aligning the mounting holes in such a way that the door bracket pivot bolt will be in line with the top rollers on the door.
5. Position the door bracket to the center line on the door. Using suitable hardware, attach the door bracket to the door. Many installations, except solid wood doors, will require additional support for the door. Refer to the illustration below.

IMPORTANT NOTE: At this time, ensure all bolts and lag screws are properly secured.

## ENTRAPMENT PROTECTION ACCESSORIES (OPTIONAL)

## SENSING EDGES \& PHOTO EYES

Sensing devices supplied for door industry type operators with an isolated normally open (N.O.) output are compatible with your operator. This includes pneumatic and electric edges, and through beam and retro reflective photo eyes. If your door does not have a bottom sensing edge or safety photo eyes and you wish to add a safety device to your application, please contact your local LiftMaster Authorized Dealer.

If not pre-installed by the door manufacturer, mount the sensing edge on the door according to the instructions provided with the edge. The sensing edge may be electrically connected by either coiled cord or take-up reel. Refer to the steps below.

## Important Notes:

a) Proceed with Limit Switch Adjustments before making any sensing edge wiring connections to operator as described below.
b) Electrician must hardwire the junction box to the operator electrical box in accordance with local codes.

## NOTICE

IT IS STRONGLY RECOMMENDED THAT A SAFETY PHOTO EYE OR SENSING EDGE BE USED IN CONJUNCTION WITH THE OPERATOR.

## WIRING:

For wiring of your sensing device to the operator, refer to the wiring diagram supplied with your operator. See field connection terminals identified as Sensing Device or Safety Edge.

TAKE-UP REEL: Take-up reel should be installed 12 " above the top of the door.

COIL CORD: Connect operator end of coil cord to junction box (not supplied) fastened to the wall approximately halfway up the door opening.

## LIMIT SWITCH ADJUSTMENT

make sure the limit nuts are positioned between the limit switch actuators before PROCEEDING WITH ADJUSTMENTS.

1. To adjust limit nuts depress retaining plate to allow nut to spin freely. After adjustment, release plate and ensure it seats fully in slots of both nuts.
2. To increase door travel, spin nut away from actuator. To decrease door travel, spin limit nut toward actuator.
3. Adjust open limit nut so that door will stop in open position with the bottom of the door even with top of door opening.
4. Repeat Steps 1 and 2 for close cycle. Adjust close limit nut so that actuator is engaged as door fully seats at the floor.

## A. Warning

TO AVOID SERIOUS PERSONAL INJURY OR DEATH FROM ELECTROCUTION, DISCONNECT ELECTRIC

If other problems persist, call our toll-free number for assistance - 1-800-528-2806.

(Aux. Close) Limit Switch

## POWER WIRING CONNECTIONS

Remove the cover from the electrical enclosure. Inside this enclosure you will find the wiring diagram(s) for your unit. Refer to the diagram (glued on the inside of the cover) for all connections described below. If this diagram is missing, call the number on the back of this manual. DO NOT INSTALL ANY WIRING OR ATTEMPT TO RUN THIS OPERATOR WITHOUT CONSULTING THE WIRING DIAGRAM.

## 今 WARNING <br> DISCONNECT POWER AT THE FUSE BOX BEFORE PROCEEDING. <br> OPERATOR MUST BE PROPERLY GROUNDED AND PERMANENTLY WIRED IN ACCORDANCE WITH LOCAL ELECTRICAL CODES. NOTE: THE OPERATOR SHOULD BE ON A SEPARATE FUSED LINE OF ADEQUATE CAPACITY. <br> ALL ELECTRICAL CONNECTIONS MUST BE MADE BY A QUALIFIED INDIVIDUAL.

## A WARNING

TO AVOID DAMAGE TO DOOR AND OPERATOR, MAKE ALL DOOR LOCKS INOPERATIVE. SECURE LOCK(S) IN "OPEN" POSITION.
IF THE DOOR LOCK NEEDS TO REMAIN FUNCTIONAL, INSTALL AN INTERLOCK SWITCH.

## POWER WIRING

1. Be sure that the power supply is of the correct voltage, phase, frequency, and amperage to supply the operator. Refer to the operator nameplate on the cover.
2. Using the 1-1/16" dia conduit access knockout as shown below, bring supply lines to the operator and connect wires to the terminals indicated on the WIRING CONNECTIONS DIAGRAM.

DO NOT TURN POWER ON UNTIL YOU HAVE FINISHED MAKING ALL POWER AND CONTROL WIRING CONNECTIONS AND HAVE COMPLETED THE LIMIT SWITCH ADJUSTMENT PROCEDURE.

IMPORTANT: THIS UNIT MUST BE PROPERLY GROUNDED. A GROUND SCREW IS SUPPLIED IN THE ELECTRICAL BOX FOR CONNECTION OF THE POWER SUPPLY GROUND WIRE. FAILURE TO PROPERLY GROUND THIS UNIT COULD RESULT IN ELECTRIC SHOCK AND SERIOUS INJURY.

## ON THREE PHASE MACHINES ONLY!

Incorrect phasing of the power supply will cause the motor to rotate in the wrong direction (open when CLOSE button is pressed and vice-versa). To correct this, interchange any two of the incoming three phase power lines.

## CONTROL WIRING

## DETERMINE WIRING TYPE

Refer to the wiring diagram located on the inside cover the electrical box to determine the type of control wiring.

## Standard C2 or B2 Wiring

Standard operators are shipped from the factory with jumper set for C2 wiring, which requires constant pressure on button to close the door. If momentary contact on close direction is desired (B2 wiring) you must include an entrapment protection device. See close control jumper setting below.

## - Constant pressure on close (C2 wiring)

Red jumper wire was placed on terminal \#2 in electrical enclosure. The operator will require constant pressure on close control in order to keep door moving in the close direction.

- Momentary contact on close (B2 wiring)

Move red jumper wire from terminal \#2 to terminal
\#3. The operator will require only momentary contact to close the door.

## SPECIAL CONTROL WIRING

If your operator was shipped from the factory with non-standard control wiring or with optional accessories that require addition instructions, refer to the wiring diagram(s) indicated in the special control wiring data box. When a replacement wiring diagram is present, wiring diagrams in this manual will not apply. Refer only to the replacement wiring diagram for all connections.

IMPORTANT NOTE: If your wiring diagram is missing, or you are unsure of the wiring type for your operator, contact the customer service department @ 1-800-528-2806.

## LOCATING THE CONTROL STATION

All operators are supplied with some type of control station. Generally a three button station (OPEN/CLOSE/STOP) is provided. A two-position key switch or control station (OPEN/CLOSE) may be added or substituted when requested at the time of order. Mount the control station near the door.

## WARNING

> INSTALL THE CONTROL STATION WHERE THE DOOR IS VISIBLE, BUT AWAY FROM THE DOOR AND ITS HARDWARE. IF CONTROL STATION CANNOT BE INSTALLED WHERE DOOR IS VISIBLE, OR IF ANY DEVICE OTHER THAN THE CONTROL STATION IS USED TO ACTIVATE THE DOOR, A REVERSING EDGE MUST BE INSTALLED ON THE BOTTOM OF THE DOOR. FAILURE TO INSTALL A REVERSING EDGE UNDER THESE CIRCUMSTANCES MAY RESULT IN SERIOUS INJURY OR DEATH TO PERSONS TRAPPE BENEATH THE DOOR.

## MOUNT WARNING NOTICE

IMPORTANT: Mount WARNING NOTICE beside or below the push button station.

## Radio Controls

On all models with type B2 control wiring, a terminal bracket marked R1 R2 R3 is located on the outside of the electrical enclosure. All standard radio control receivers (single channel residential type) may be mounted to this bracket. The operator will then open a fully closed door, close a fully open door, and reverse a closing door from the radio transmitter. However, for complete door control from a transmitter, a commercial three-channel radio set (with connections for OPEN/CLOSE/STOP) is recommended.

| (a) WARNING |
| :--- |
| DO NOT USE RADIO CONTROLS WITH YOUR |
| OPERATOR UNLESS YOU HAVE INSTALLEED |
| SOME TYPE OF ENTRAPMENT PROTECTION |
| DEVICE. THE USE OF RADIO CONTROLS |
| PRESENTS POTENTIAL HAZARDS DUE TO THE |
| USER'S ABILITY TO OPEN OR CLOSE THE |
| DOOR WHEN OUT OF SIGHT OF THE DOOR. IN |
| ADDITION, IFA AINGLE CHANNEL CONTROL IS |
| USED, THE USER WILL NOT BE ABLE TO STOP |
| THE DOOR FROM THE TRANSMITTER. |

## WARNING

DO NOT USE RADIO CONTROLS WITH YOUR OPERATOR UNLESS YOU HAVE INSTALLED SOME TYPE OF ENTRAPMENT PROTECTION
 USENS PILITY TO HAZARDS DUETO THE DOOR WHEN OUT OF SIGHT OF THE DOOR. IN ADDITION, IF A SINGLE CHANNEL CONTROL IS THE DOOR FROM THE TRANSMITTER.

## Additional Access Control Equipment

Locate any additional access control equipment as desired (but so that the door will be in clear sight of the person operating the equipment), and connect to the terminal block in the electrical enclosure as shown on the FIELD WIRING CONNECTIONS diagram. Any control with a normally (N.O.) isolated output contact may be connected in parallel with the OPEN button. More than one device may be connected in this manner. Use 16 gauge wire or larger for all controls. DO NOT USE THE CONTROL CIRCUIT TRANSFORMER (24VAC) IN THE OPERATOR TO POWER ANY ACCESS CONTROL EQUIPMENT OTHER THAN A STANDARD RESIDENTIAL TYPE RADIO RECEIVER.

## External Interlock Switch

The operator has a terminal connection for an external interlock switch. This switch must be a normally closed (N.C.) two-wire device with a contact rating of at least $3 \mathrm{amps} @ 24 \mathrm{VAC}$. When such a switch is connected as shown on the FIELD WIRING CONNECTIONS diagram, the control circuit will be disabled when the switch is actuated, thereby preventing electrical operation of the door from the control devices.

## CLUTCH ADJUSTMENT

1. Remove cotterpin from nut on the clutch shaft.
2. Back off clutch nut until there is very little tension on the clutch spring.
3. Tighten clutch nut gradually until there is just enough tension to permit the operator to move the door smoothly but to allow the clutch to slip if the door is obstructed. When the clutch is properly adjusted, it should generally be possible to stop the door by hand during travel.

4. Reinstall Cotterpin.

CAUTION: The adjustable friction clutch is NOT an automatic reversing device. An electric or pneumatic reversing edge can be added to bottom edge of door if desired.

TO RECONNECT DOOR ARM TO TROLLEY

## TEST THE SYSTEM

Turn on power. Test all controls and safety devices to make sure they are working properly. It will be necessary to refer back to page 6 for fine adjustment of the limit switches.

## IMPORTANT NOTES:

- Do not leave operator power on unless all safety and entrapment protection devices have been tested and are working properly.
- Be sure you have read and understand all Safety Instructions included in this manual.
- Be sure the owner or person(s) responsible for operation of the door have read and understand the Safety Instructions, know how to electrically operate the door in a safe manner, and know how to use the manual disconnect operation of the door operating system.

Lift free end of door arm to trolley. Pull emergency handle to allow arm to engage roll pin. Release handle. Emergency disconnect will close.

## BRAKE ADJUSTMENT

A solenoid brake is standard on $3 / 4$ and 1 horsepower models, and is optional on $1 / 3$ and $1 / 2$ horsepower models. The brake is adjusted at the factory and should not need additional adjustment for the the life of the friction pad.

Replace friction pads when necessary. Refer to the illustration for identification of components for the solenoid type brake system.

Solenoid Brake System

## MAINTENANCE SCHEDULE

Check at the intervals listed in the following chart.

| ITEM | PROCEDURE | EVERY <br> 3 MONTHS | EVERY <br> 6 MONTHS | EVERY <br> 12 MONTHS |
| :---: | :---: | :---: | :---: | :---: |
| Drive Chain | Check for excessive slack. Check \& adjust as required. Lubricate.* | $\bullet$ |  | $\checkmark$ |
| Sprockets | Check set screw tightness | $\bullet$ |  | $\checkmark$ |
| Clutch | Check \& adjust as required |  | $\bullet$ | $\checkmark$ |
| Belt | Check condition \& tension |  | - | $\checkmark$ |
| Fasteners | Check \& tighten as required |  | - | $\checkmark$ |
| Manual Disconnect | Check \& Operate |  | - | $\checkmark$ |
| Bearings \& Shafts | Check for wear \& lubricate | - |  | $\checkmark$ |

* Use SAE 30 Oil (Never use grease or silicone spray).
$\checkmark$ Repeat ALL procedures.
■ Do not lubricate motor. Motor bearings are rated for continuous operation.
■ Do not lubricate clutch or V-belt.
■ Inspect and service whenever a malfunction is observed or suspected.
■ CAUTION: BEFORE SERVICING, ALWAYS DISCONNECT OPERATOR FROM POWER SUPPLY.

HOW TO ORDER REPAIR PARTS
OUR LARGE SERVICE ORGANIZATION SPANS AMERICA
INSTALLATION AND SERVICE INFORMATION ARE AVAILABLE 6 DAYS A WEEK
CALL OUR TOLL FREE NUMBER - 1-800-528-2806 HOURS 7:00 TO 3:30 p.m. (Mountain Std. Time) MONDAY Through SATURDAY

2. Overload in motor for models up to $3 / 4 \mathrm{Hp}$, located in limit box for 1 Hp and above.

## ILLUSTRATED PARTS - ELECTRICAL BOX

## REPLACEMENT PART KITS - ELECTRICAL BOX

Below are replacement kits available for your operator. For replacement of electrical box, motor or brake components be sure to match model number of your unit to kit number below to ensure proper voltage requirements. Optional modifications and/or accessories included with your operator may add or remove certain components from these lists. Please consult a parts and service representative regarding availability of individual components of kits specified below. Refer to page 11 for all repair part ordering information.

## Complete Electrical Box Replacement Kits

To order a complete electrical box kit, add a K74- prefix to the model number of your operator. For example:
T5011M (Operator) = K74-T5011M (Electrical box replacement kit)
